Note: This statement shall only be relied upon by the Building Consent Authority named above. Liability under this statement accrues to the Design Firm only. The total maximum amount of damages payable arising from this statement and all other statements provided to the Building Consent Authority in relation to this building work, whether in contract, tort or otherwise (including negligence), is limited to the sum of \$200,000*.

This form is to accompany Form 2 of the Building (Forms) Regulations 2004 for the application of a Building Consent.

THIS FORM AND ITS CONDITIONS ARE COPYRIGHT TO ACENZ, ENGINEERING NEW ZEALAND AND NZIA

Schedule to Producer Statement PS1

Lifestyle Cabins import the Grove Solid Wood Cabin kitset cabin which falls under the category of a "single-story detached buildings up to 30m2" which are building consent exempt.

TD Structures have been engaged by lifestyle cabins to provide a design review of the Grove cabins in accordance with the building consent exemption requirements.

The following schedule to the PS1 outlines the assumptions and documentation required for this review. It should be noted that any deviation from the requirements in this document will void this design certificate/producer statement.

Register of Documentation:

- 1. Lifestyle Cabins Assembly Instructions Grove Solid Wood Cabin 2.8X2.8m
- 2. Parts list for the Grove Solid Wood Cabin
- 3. TDS Design features report
- 4. TDS Additional fixing detail requirements

Design Assumptions:

- 1. Foundations and foundation connections (from provided bearers to chosen foundation solution) are assumed to be on "good ground" as per NZS 3604 and constructed in accordance with acceptable solutions provided within NZS 3604 2011.
- 2. No substitution with the products included in this design certificate is permitted.
- 3. Local authority and planning regulations should be confirmed by the owner prior to installation.
- 4. The installation will be carried out by a competent person with a thorough understanding of the building techniques required.

Durability: (NB: this Design certificate does not cover B2 Durability)

- To maintain the timber and to extend the expected life of the individual elements, it is highly recommended that the timber walls be treated appropriately for their specific environmental exposure. Lifestyle Cabins have provided guidance in relation to this. Additionally, a coating specialist will be able to advise on this.
- 2. To maintain durability to the subfloor and foundations elements, the acceptable solutions within NZS 3604 are to be used.

Additional Requirements to the standard Installation:

- 1. Rafters to be nailed down into walls as per attached mark up
- 2. Door jambs and lintels to be fixed to wall sections as per attached mark up
- 3. Exterior braces to be fixed as per attached mark up
- 4. Floors to be screwed down to bearers as per attached mark up

DESIGN FEATURES REPORT

TDS Job No: 21149 Date: 12-11-21 Author: DL Reviewer: DL

These calculations pertain to Grove Solid Wood Cabin 2.8X2.8m

at Various locations within the limitations detailed in the schedule

and cover the following design aspects:

Superstructure design only of the timber cabins for wind, snow and Earthquake loads

IL = 1

Design life = 15 years with time to first maintenace (TTFM) of 5 years

Standards referenced

AS/NZS1170.2:2021 - Wind NZS 3603:1993 A1,2,4 - timber NZS 3604:2011 - timber buildings

Wind loads

Medium

SED AS/NZS1170 - Quls

0.7

KPa

Snow loads

Sub apline regions only

Structural form

Gravity:

Tongue and groove timber ceiling spanning between timber joists onto solid timber walls. Walls and floor span between timber bearers onto non-engineer designed 3604 type foundation solution.

Lateral Loads:

Timber walls span horizontally between return walls and/or door/window jambs. Door and window jambs span vertically to floor and/or composite lintel beam. At each exterior edge vertical battens provide mechanical anchorage from the roof to the floor so that the walls can act in plane. Fixings to the foundations resist overturning forces.

Permanent actions (dead loads) and live loads

Dead loads

	Roof	Floor	External walls	Internal walls
Description	lightweight roofing	timber framed floor	solid timber wall	solid timber wall
Unit load	0.25 kPa	0.2 kPa	0.25 kPa	0.25 kPa

Live loads (Refer table 3.1 & 3.2 Part 1 AS/NZS 1170)

	Roof	Floor	Deck	Garage
Distributed load	N/A	1.5 kPa*	N/A	N/A
Point load	N/A	1.8 kN	N/A	N/A

^{&#}x27;*Denotes reductions allowable in specific cases

Barrier loads N/A

Designed using requirements of clauses 3.6 and 3.8 of AS/NZS 1170.1 as modified by B1/VM1 (clauses 2.2.7 and 2.2.8) with imposed actions as specified in Table 3.3 of AS/NZS 1170.1.

Ductility

ductility = 3
